

The Energy Settlement Network is an enterprise-grade, cloud platform that replaces manual settlement processes with digitalization and automation. In 2018, ESN membership more than doubled and the number of network transactions more than tripled.

ESN is scaling rapidly

- More than **1000 companies** settle on ESN
- More than **25 million transactions** processed
- More than **\$37 billion** settled
- More than **9Bcf** settled
- More than **500K MWhr** settled
- Used by settlement departments on **5 continents**
- Legal entities in **3 countries**: Canadian, US and Mexican
- More than **2,800** power delivery locations
- More than **23,000** gas meter stations

The driver behind ESN's rapid growth is the strategic value it delivers by applying digitalization and automation to resolve pressing wholesale energy settlement challenges. A digital settlement department can settle transactions faster and benefits from increased security, reduced risk, simplified compliance reporting, and improved cash-flow management.

About Aquilon Energy Services, Inc.

Aquilon Energy Services, Inc. develops innovative software and service solutions for the energy industry. The Aquilon team combines deep industry insights with advanced technology to bring reliable, collaborative solutions to the energy market. The company was named the 2017 Innovation of the Year by Energy Risk magazine. Contact Aquilon to learn more or request a demonstration.
